

LG V10 Battery Replacement

A replacement guide for the battery of the LG V10 in case the battery isn't holding its charge.

Written By: Nikolai Lesh

INTRODUCTION

Before replacing the battery, turn off the LG V10. If your LG V10 is being charged for a couple hours but quickly drains even when it's not being used, for example the battery percentage goes from 100% to 95% within ten minutes of being unplugged, then the battery's life has been depleted and may need to be replaced.

TOOLS:

- [Spudger](#) (1)

PARTS:

- [LG V10 Battery](#) (1)

Step 1 — Battery

- Wedge the flat end of the plastic spudger, or the tip of your finger, in between the back cover and the LG V10's charging port.

 If using a spudger, it should not be in the charging port, but between the metal lining of the charging port and the back cover.

- Carefully lift up on the spudger or with your finger so that the back cover pops up. The rest of the back cover should easily come off by sliding a finger or spudger under the back cover and around the sides.

Step 2

- There's an impression next to the battery for the user to use their finger to pry the battery out; pry the battery out using your finger or the flat end of the spudger.

After replacing the old battery with a new one, reattach the back cover and press down on all sides to make sure it's properly reattached.
